EDUCATION

University of California, Berkeley

B.A. Data Science (Concentration: Applied Mathematics and Modeling), Education Minor

GPA: 3.9 / 4.0

Coursework: Data Science Principles, Data Structures and Algorithms, Computer Programs, Data Engineering, Probability/Statistics, Linear Algebra, Machine Learning, Full Stack Development, Artificial Intelligence

Organizations: Data Science Foundations Scholar, Data Science Discovery Research Program, Data Science Society

SKILLS

- **Programming Languages:** Python, SQL, R, Java, HTML, CSS, JavaScript
- **Libraries:** Pandas, NumPy, Scikit-learn, PyTorch, Tensorflow, Matplotlib, Seaborn, SciPy, Plotly, NLTK
- **Tools/Other:** Git, AWS, Microsoft Office, Tableau, Power BI
- **Soft Skills:** Problem-solving, Communication Skills, Critical Thinking, Team Leadership, Troubleshooting, Teaching, Presentation

EXPERIENCE

AMD

Jan 2026 – May 2026

Data Science PM (Contract)

Remote

- Led team of 10 in developing **Python/Jupyter-based dashboards** to identify performance bottlenecks in GPU trace data
- Synthesized **GPU trace analysis** insights to stakeholders, enabling targeted optimization efforts across engineering teams
- Coordinated team execution through structured delegation/weekly milestone tracking; reduced GPU runtime by **~500 μ s**

UC Berkeley Data Science Undergraduate Studies Dept.

Sept 2025 – Dec 2025

Software Developer Intern

Berkeley, CA

- Engineered backend software modules in **Python and Jupyter** for school curricula, improving **long-term ease** of use
- Streamlined collaboration maintaining a clean, modular codebase adopted by developers using **Git and GitHub Pages**
- Designed and deployed **math and calculus visualizations using Plotly**, reducing preparation time by **~60%** while enhancing teaching efficiency and student comprehension of complex concepts

Oakland Natives Give Back

Sep 2024 – May 2025

Data Science Intern

Oakland, CA

- Collaborated cross-functionally with business & data science teams using **Python/SQL** to highlight absenteeism factors
- Directed **Tensorflow** ML model creation in a team of 5 to classify future student tendencies, increasing accuracy by **~10%**
- Enhancing stakeholder decision-making speed with dashboards (**using Matplotlib & Seaborn**) for funding allocation

City and County of Santa Clara

Jan 2025 – Aug 2025

Data Science Consultant

Berkeley, CA

- Uncovered **top 10** leading factors for successful outcomes in Mental Health Facilities with A/B testing & experimentation
- **Simplified model complexity** using **logistic regression** leading to improved **model interpretability** for stakeholders
- Improved both **Precision and Recall** by **~10%** by balancing the dataset to account for biased data in experimentation

Data Science Society

Aug 2024 – Present

Director of Academic Development

Berkeley, CA

- Directed classes of **over 100** students with lecture content/resources surrounding **Data Science Principles for industry**
- Supervised the multiple teams on the Data Science Lifecycle as a Product Manager (EDA, Hypothesis Testing, ML)

PROJECTS

Scheduler AI | *Python, Langchain, Node.js*

Jun – Aug 2025

- Optimizes dates/times to create the best fit schedule based on user preferences and calendar data imported by the user
- Utilizes **Langchain and API calls along with Node.js** to analyze and create the best fit schedule to the calendar
- Accessible Calendar UI through the website which lets the user see and make changes is necessary

Student Absenteeism Prediction Model | *SQL, Tensorflow, Supervised Learning*

Aug – Dec 2024

- Conducted an in-depth analysis on factors leading to absenteeism using cleaning, feature engineering, and visualizations
- After querying from **relational databases**, using EDA for non-profit to create programs attacking students at risk
- Using neural networks & RELU, created **>80% accurate diagnosis for Absentee Prediction**, comparing it to XGBoost
